### New build underground garage. Stadhalle, Hechingen

The parking capacity for the Stadhalle no longer accommodated the existing and foreseeable number of visitors to the Stadhalle, Fürstengarten and Obertorplatz. As a result of a feasibility study, a one storey underground car park combined with parking spaces on the roof was developed. The entrance and exit ramp were positioned between the Stadhalle and the underground car park, which could also be used for deliveries to the Stadhalle.

The existing children's playground was rebuilt after the underground car park was completed.

The parking level consists of two traffic aisles, on which the 2.60 m wide parking spaces are arranged diagonally on both sides of the aisles for convenient accessibility.
